

Kubernetes StatefulSet for MySQL

Houssem Dellai

Creating MySQL cluster with primary/replicas

1. Creating primary MySQL instance and database
2. Creating a replica
3. Cloning database from primary to replica
4. Continuously replicating database using Percona XtraBackup

<https://kubernetes.io/docs/tasks/run-application/run-replicated-stateful-application/>

Stateful Set
MySQL
↳ primary
↳ replicas

Replicas: 3
